Samuel Okechukwu

Cloud & Software Engineer

San Francisco Bay Area, CA | sam.okechukwu99@gmail.com | github.com/SamioneX | www.linkedin.com/in/sokech | sokech.com

Early-career software engineer with enterprise experience at BlackRock and hands-on depth across cloud infrastructure, backend systems, and low-level programming. Builds production-oriented systems with AWS, CI/CD, observability, and IaC, with additional academic grounding in systems programming, operating systems, and assembly.

EXPERIENCE

Software Engineer I | BlackRock Sep 2021 - Jan 2022
San Francisco, CA (Remote)

- Contributed features, bug fixes, and refactors across production financial systems in a regulated enterprise environment.
- Worked within Git-based CI/CD workflows, peer review, and agile delivery practices on large shared codebases.

Software Engineering Analyst Intern | BlackRock Jul 2020 - Aug 2020
San Francisco, CA (Remote)

- Helped deliver a cloud-ready MVP by migrating a monolithic Java desktop workflow toward modular web services and an Angular frontend.
- Earned a full-time return offer based on internship performance.

PROJECTS

CloudClips | Serverless short-video platform with AI content moderation and auto-generated captions Feb 2026
github.com/SamioneX/CloudClips | cloudclips.sokech.com

- Built a serverless video platform with direct-to-S3 uploads, asynchronous transcoding, AI moderation, captions, and CDN delivery.
- Automated end-to-end deployment with AWS CDK, Cloudflare-integrated DNS, and GitHub Actions OIDC CI/CD.

InfraKit | Production-grade AWS infra CLI with schema validation & state Mar 2026
github.com/SamioneX/InfraKit

- Built a production-style AWS infrastructure CLI with schema validation, dependency planning, rollback support, and S3/DynamoDB state locking.
- Shipped the tool through multiple distribution paths with strong test coverage and reproducible release workflows.

Lighthouse | High-performance Layer 4 reverse proxy and load balancer with event-driven I/O and production-style observability. Mar 2026
github.com/SamioneX/Lighthouse

- Implemented a Layer 4 load balancer in C++ with event-driven I/O, backend failover, and production-style metrics.
- Used Linux systems tooling and low-level networking concepts to show depth beyond application-layer development.

Additional: SentinelAPI | Conduit | Resilient Mesh | sokech.com

SKILLS

Cloud: AWS, CDK, Terraform, Docker, Kubernetes, CI/CD, Observability

Languages: Python, Java, TypeScript, C/C++, Go, Rust, SQL

Systems: Linux/Unix, Systems Programming, OS Internals, x86/x64 Assembly, Virtualization

Data/Infra: Kafka, PostgreSQL, Redis, S3, DynamoDB, ECS, EKS

EDUCATION

M.S. Computer Science
Georgia Southwestern State University | 2024 - 2025

B.S. Computer Science
University of Illinois Chicago | 2017 - 2021
Teaching Assistant for Systems Programming; built a garbage collector in coursework and a minimal Unix-like OS with additional syscalls and shell utilities.

CERTIFICATIONS

AWS Certified Solutions Architect - Associate | AWS Certified Developer - Associate | AWS Certified SysOps Administrator - Associate
